Huang Yufan

Mobile: +86 13786239960 | **Email:** 8290821@gmail.com
Research interests: Human-Computer Interaction, Virtual Reality

EDUCATION

Donghua University, China 09/2021-06/2025
BA Product Design, Average Marks: 88/100 (Rank: Top 20%)
Honours: Second Prize Scholarship, First Prize, Second Prize, and Third Prize, 2024 Milan Design Week China Non-Thematic Track for University Design Disciplines

KTH Royal Institute of Technology, Sweden 09/2025-06/2027
MSc Interactive Media Technology

RESEARCH EXPERIENCES

Undergraduate Project: Digital Healthcare MR Design for Breast Cancer Treatment (2024~2025)

- Integrated digital healthcare technologies into the breast cancer treatment and service workflow
- Optimized medical space layout through redesigned patient-centered care processes
- Applied immersive VR at key service stages to enhance doctor–patient communication
- Developed an MR-based 3D visualization approach for lesion and physiological data

Course project: Politeness Strategies and Spatial Positioning in VR Group Interaction (2025)

- Designed a VR experiment manipulating politeness strategies and spatial positions of virtual agents
- Examined trade-offs between efficiency and social spatial norms in group interaction
- Analysed heart rate, compliance, friendliness, and perceived social presence
- Found spatial ambiguity reduced persuasiveness and social presence in VR interactions

Individual course: Perceived Politeness in Virtual Characters: The Effect of Animation Motions Independent of Character Appearance(2026~)

- Investigated whether animation motion libraries can be perceived as polite behaviours in virtual characters. Supervisor: Dr. Robin Palmberg, Postdoctoral Researcher, KTH Royal Institute of Technology

PATENTS

Huang, Y. (Sole Inventor). Glass Window Facade Structure for Preventing Bird–Window Collisions. Design Patent Application, Under Review, China National Intellectual Property Administration (CNIPA), 2025.

PRACTICAL EXPERIENCES

HEXAGON 06/2024-09/2024
Product Management Internship – Education Solutions Department

- Assisted in the design of three-coordinate teaching products to improve user interaction
- Responsible for creating virtual digital personas for Hexagon Education's platform
- Engaged in the optimization of virtual simulation prototypes to enhance their usability
- Worked closely with other teams to create innovative design approaches

SKILLS AND INTERESTS

Programming & Engines: Unity (C#), Python, Arduino.
Design & Media: Rhino, Adobe Suite, Blender.
Research Methods: User Interview, Quantitative Analysis (SPSS/Python), User Testing.
Hardware: VR Headsets (Meta quest), Physiological Sensors (Heart Rate, Skin Conductance).
